DETAILED ACTION

Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 16-19 and 21-23 directed to an invention non-elected with traverse in the reply filed on 05/27/2009.

Applicant is given TWO MONTHS from the date of this letter, whichever is longer, to cancel the noted claims or take other appropriate action (37 CFR 1.144). Failure to take action during this period will be treated as authorization to cancel the noted claims by Examiner's Amendment and pass the case to issue. Extensions of time under 37 CFR 1.136(a) will not be permitted since this application will be passed to issue.

The prosecution of this case is closed except for consideration of the above matter.

2. Previously withdrawn claims 8-11 are rejoined and fully examined for patentability under 37 CFR 1.104.

Allowable Subject Matter

1. Claims 1-15, 20, and 24 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or render obvious the invention as essentially claimed.
3. Brehm et al. (U.S. Pat. No. 5,547,165) was considered most pertinent to applicant's disclosure.

Brehm et al. disclose pulse valve (fig. 1) with a closing body (43) that cooperates with a valve seat (41) by at least a valve spring (25) and, in a first switching position, establishes a flow connection between a supply channel (40) and a discharge channel (44) and, in a second

switching position, blocks the flow connection, the closing body (43) periodically moving in a reciprocating motion between the two switching positions during an actuation of the pulse valve, wherein a hydraulic damping to a movement of the closing body by a throttle gap (50b, fig. 3) occurs in a damped range (within 51 b), wherein the closing body (43) is connected via a rod (21b) with a damping disk (22b) made of structural material, the damping disk provided in a damping cylinder (51b) that is open on a first end face, the damping cylinder forming around a circumference of the damping disk the throttle gap while the damping disk moving inside the damping cylinder, and wherein the damping disk (22b) exits the damping cylinder shortly before the closing body reaches the second switching position (as shown in fig. 3). However, Brehm et al. does not disclose wherein the damping cylinder is closed on a second end face located opposite to the first end face, except for a guide opening in which the rod is guided. Modifying Brehm's damping cylinder (51b) to include a closed second end face with only a guide opening would require substantial modification since the rod (21b) is not designed to extend past the damping cylinder. Furthermore, it would not be considered obvious for one to modify Brehm in such manner since there lacks motivation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. This application is in condition for allowance except for the following formal matters:

Withdrawn claims 16-19 and 21-23 need to be cancelled or addressed by another appropriated action (37 CFR 1.144).

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
